10:00 AM to 2:00 PM CST

Dear Fellow Atari User,

Welcome to our Public Domain Library. We have one of the world's largest and the best organized collection of PD software for the Atari 800/XL/XE computer. We are constantly adding new disks to our catalog so watch for more coming soon. We have spent a lot time and have gone to much expense in making these programs available and we would like to share them with you.

This library was formed as an alternative to paying high prices for commercial software. We provide you a low cost copy service for public domain software. Most disks have a large number of programs on them making them one of the best values anywhere. The small fee we charge is to cover the cost involved in copying, labeling, packaging, mailing and other expenses involved in making these programs available.

I know you will like our disks; Like them, You'll love them! We have a large selection to choose from. The disks are packed full of programs I am sure you will find very entertaining, educational, and very useful as well. We have disks for programmers and ham radio enthusiasts, astronomy, educational, business, and of course lots of games to choose from. Some of the disks have documentation files on them, some of the disks are Menu Driven, and with others you just follow the instructions on the screen.

We guarantee our disks to load or we will replace them at no charge. Just return it within 60 days with a note explaining the problem, and we will send out a replacement for it immediately.

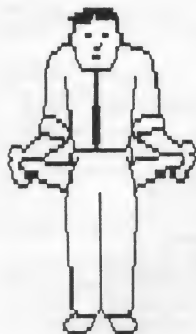

We will also trade for public domain software that is not listed in our catalog. We will trade disk for disk. For every disk of public domain software you send to us, we will send you the disk of your choice from our catalog. Please be sure to send only public domain software that is not in our catalog. Trading is limited to no more than 20 disks per trade.

To the best of our knowledge all of the programs in our catalog are either public domain or shareware. If you find a program that is not, please let us know so that we can promptly remove it.

Sincerely,
Rusty Cryer

PD146 - Mach DOS

A unique "pop-up" window type DOS menu. Auto switching of densities between single and double. Default drive setting, fast sector copying, multiple file copying, write verify/on/off, DOS 2.0/2.5 compatible. On the XL/XE this DOS automatically switches BASIC off when typing DOS to give you more RAM and switches BASIC back on when you select (B) to run cartridge. Includes documentation on disk.

PD148 - DOS 2.5+

By Tim Patrick. This is a modified version of ATARI's DOS 2.5, it has a number of improvements. Here is a few of the improvements. You may use upper or lower case characters in filenames along

with some other characters not allowed in Atari 2.5. This DOS defaults to the fast write (without verify). This disk also contains a new patch for the XL/XE operating system that will let you access the speed of the HAPPY enhanced disk drives! This patch may be used with any DOS. There is 3 different RAMDISK files on this disk, one of them is a special ramdisk for XL owners that sets up a 105 sector Ramdisk. You can also set up a fast keyboard. If you have a favorite character set (font), it will load in place of the default O/S set and become the default for use while using DOS 2.5+! There is 5 different fonts to pick from. Documentation is included on disk.

PD408 - CopyMate 4.4

See PD038 CopyMate 4.3 for more information. There is not much difference if any between the new version 4.4 and the old version 4.3. If you already have CopyMate 4.3 it may not be worth getting this newer version. If you own neither one than the 4.4 would be better to order because of the DOC file that is included on the disk.

PD409 - MYCOPYR!

This copy program is very much like CopyMate 4.3 and 4.4 but we are giving this one the best rating between them all. MyCopyR! is a versatile disk copy program capable of High Speed I/O, single, double, and the 1050 enhanced density. Supports US Doublers and Happy Drives. Automatically adjusts between the 3 different densities. It utilizes most memory upgrades and the extra 64K on the 130XE. Toggle write verify on or off. Toggle format on or off. Also has the option of using ICD's ULTRASPEED sector SKEW when formatting allowing you to create FAST DISKS from NORMAL SPEED disks or NORMAL SPEED disks from FAST DISKS. High speed I/O is also capable on most HAPPY 1050 drives and much easier to use than the sector copier that came on the Warp Speed Software disk. Don't think you have to have a modified drive to use this program we think it is the best copier for any type of drive. It is a must have for any 1050 owner or any one else using the DOS 2.5 enhanced density. Includes a DOC file on the disk.

New SpartaDOS Utilities

These 3 disks have been added to the SpartaDOS Utilities Set. The complete set now is 9 disks instead of 6. Also see PD401 to PD406.

HOW TO READ DOC OR TXT FILES

Most DOC or TXT files were created using a word processor. You can read or print these using almost any word processor. Another way is to go to the DOS (2.0 or 2.5) menu and select C for COPY FILE. To print a file to the screen type D1:FILENAME.EXT,E: (The E: is telling DOS to copy the file to the screen). To pause and restart the scrolling on the screen hold down Control and press 1. To print a file to the printer type D1:FILENAME.EXT,P: (The P: is telling DOS to copy the file to the printer). In these examples replace the word FILENAME.EXT with the real filename and extension of the file you wish to read.
